ABSTRACT

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language. Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

DECLARATION

I hereby certify that the submitted work is my own work, was completed while registered as a candidate for the degree stated on the Title Page, and I have not obtained a degree elsewhere on the basis of the research presented in this submitted work.

Aonghus Lawlor,

July 9, 2024

COLLABORATIONS

This work was conducted in collaboration with the following:

- Dr. A. N. Other The work in [Chapter 3](#) was conducted while visting the laboratory of Dr. A. N. Other.

INTRODUCTION

In an era marked by an exponential growth of information and digital content, recommender system (RS) have emerged as pivotal tools in helping users navigate through the vast sea of choices. These systems are integral to numerous applications, from online shopping and streaming services to social media and personalized news feeds. By leveraging advanced algorithms and data-driven techniques, recommender systems aim to predict user preferences and deliver highly relevant content, thereby enhancing user experience and engagement [4].

The inception of recommender systems can be traced back to the early days of collaborative filtering (CF), which relied on user and item similarities to generate recommendations. Since then, the field has witnessed substantial advancements, incorporating sophisticated models such as matrix factorization, neural networks, and hybrid approaches that blend multiple recommendation strategies. These developments have significantly improved the accuracy and efficiency of recommendations, catering to diverse user needs and preferences [5].

Despite the remarkable progress, several challenges remain in the design and implementation of recommender systems. Issues such as scalability, cold-start problems, diversity, and fairness continue to pose significant hurdles. Furthermore, the rapid evolution of user behaviors and the dynamic nature of content necessitate continuous adaptation and innovation in recommendation methodologies [1].

This thesis aims to contribute to the ongoing discourse in the field of recommender systems by addressing key challenges and proposing novel solutions that enhance recommendation quality and user satisfaction. Through a comprehensive exploration of state-of-the-art techniques and rigorous empirical evaluations, this research endeavors to advance our understanding of effective recommendation strategies and their practical applications.

The structure of this thesis is as follows: Chapter 2 provides a detailed overview of the historical development and foundational concepts of recommender systems. Chapter 2 delves into the various algorithmic approaches [2], highlighting their strengths and limitations [3].

28 Chapter 3 addresses the pressing challenges in the field and reviews contemporary solutions
29 proposed in the literature. Chapter 4 presents the proposed methodologies and experimental
30 setups, followed by a thorough analysis of results in Chapter 5. Finally, Chapter 6 concludes
31 the thesis with a summary of findings, implications, and directions for future research.

32 By systematically investigating and addressing the complexities of recommender systems,
33 this thesis aspires to contribute valuable insights and practical advancements to the field,
34 ultimately fostering more personalized and effective user experiences across digital platforms.

BACKGROUND

2.1 SECTION A

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. $\sin^2(\alpha) + \cos^2(\beta) = 1$. If you read this text, you will get no information $E = mc^2$. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. $\sqrt[n]{a} \cdot \sqrt[n]{b} = \sqrt[n]{ab}$. This text should contain all letters of the alphabet and it should be written in of the original language. $\frac{\sqrt[n]{a}}{\sqrt[n]{b}} = \sqrt[n]{\frac{a}{b}}$. There is no need for special content, but the length of words should match the language. $a \sqrt[n]{b} = \sqrt[n]{a^n b}$.

This is the second paragraph. Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. $\sin^2(\alpha) + \cos^2(\beta) = 1$. If you read this text, you will get no information $E = mc^2$. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. $\sqrt[n]{a} \cdot \sqrt[n]{b} = \sqrt[n]{ab}$. This text should contain all letters of the alphabet and it should be written in of the original language. $\frac{\sqrt[n]{a}}{\sqrt[n]{b}} = \sqrt[n]{\frac{a}{b}}$. There is no need for special content, but the length of words should match the language. $a \sqrt[n]{b} = \sqrt[n]{a^n b}$.

And after the second paragraph follows the third paragraph. Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. $\sin^2(\alpha) + \cos^2(\beta) = 1$. If you read this text, you will get no information $E = mc^2$. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. $\sqrt[n]{a} \cdot \sqrt[n]{b} = \sqrt[n]{ab}$. This text should contain all letters of the alphabet and it should be written in of the original

61 language. $\frac{\sqrt[n]{a}}{\sqrt[n]{b}} = \sqrt[n]{\frac{a}{b}}$. There is no need for special content, but the length of words should
62 match the language. $a \sqrt[n]{b} = \sqrt[n]{a^n b}$.

63 After this fourth paragraph, we start a new paragraph sequence. Hello, here is some text
64 without a meaning. This text should show what a printed text will look like at this place.
65 $\sin^2(\alpha) + \cos^2(\beta) = 1$. If you read this text, you will get no information $E = mc^2$. Really?
66 Is there no information? Is there a difference between this text and some nonsense like
67 “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the
68 selected font, how the letters are written and an impression of the look. $\sqrt[n]{a} \cdot \sqrt[n]{b} = \sqrt[n]{ab}$.
69 This text should contain all letters of the alphabet and it should be written in of the original
70 language. $\frac{\sqrt[n]{a}}{\sqrt[n]{b}} = \sqrt[n]{\frac{a}{b}}$. There is no need for special content, but the length of words should
71 match the language. $a \sqrt[n]{b} = \sqrt[n]{a^n b}$.

72 Hello, here is some text without a meaning. This text should show what a printed text
73 will look like at this place. $\sin^2(\alpha) + \cos^2(\beta) = 1$. If you read this text, you will get no
74 information $E = mc^2$. Really? Is there no information? Is there a difference between this text
75 and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives
76 you information about the selected font, how the letters are written and an impression of
77 the look. $\sqrt[n]{a} \cdot \sqrt[n]{b} = \sqrt[n]{ab}$. This text should contain all letters of the alphabet and it should
78 be written in of the original language. $\frac{\sqrt[n]{a}}{\sqrt[n]{b}} = \sqrt[n]{\frac{a}{b}}$. There is no need for special content, but
79 the length of words should match the language. $a \sqrt[n]{b} = \sqrt[n]{a^n b}$.

TOPIC A

TOPIC B

4.1 SECTION A

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. $\sin^2(\alpha) + \cos^2(\beta) = 1$. If you read this text, you will get no information $E = mc^2$. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. $\sqrt[n]{a} \cdot \sqrt[n]{b} = \sqrt[n]{ab}$. This text should contain all letters of the alphabet and it should be written in of the original language. $\frac{\sqrt[n]{a}}{\sqrt[n]{b}} = \sqrt[n]{\frac{a}{b}}$. There is no need for special content, but the length of words should match the language. $a\sqrt[n]{b} = \sqrt[n]{a^n b}$.

This is the second paragraph. Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. $\sin^2(\alpha) + \cos^2(\beta) = 1$. If you read this text, you will get no information $E = mc^2$. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. $\sqrt[n]{a} \cdot \sqrt[n]{b} = \sqrt[n]{ab}$. This text should contain all letters of the alphabet and it should be written in of the original language. $\frac{\sqrt[n]{a}}{\sqrt[n]{b}} = \sqrt[n]{\frac{a}{b}}$. There is no need for special content, but the length of words should match the language. $a\sqrt[n]{b} = \sqrt[n]{a^n b}$.

And after the second paragraph follows the third paragraph. Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. $\sin^2(\alpha) + \cos^2(\beta) = 1$. If you read this text, you will get no information $E = mc^2$. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. $\sqrt[n]{a} \cdot \sqrt[n]{b} = \sqrt[n]{ab}$. This text should contain all letters of the alphabet and it should be written in of the original

251 language. $\frac{\sqrt[n]{a}}{\sqrt[n]{b}} = \sqrt[n]{\frac{a}{b}}$. There is no need for special content, but the length of words should
 252 match the language. $a \sqrt[n]{b} = \sqrt[n]{a^n b}$.

253 After this fourth paragraph, we start a new paragraph sequence. Hello, here is some text
 254 without a meaning. This text should show what a printed text will look like at this place.
 255 $\sin^2(\alpha) + \cos^2(\beta) = 1$. If you read this text, you will get no information $E = mc^2$. Really?
 256 Is there no information? Is there a difference between this text and some nonsense like
 257 “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the
 258 selected font, how the letters are written and an impression of the look. $\sqrt[n]{a} \cdot \sqrt[n]{b} = \sqrt[n]{ab}$.
 259 This text should contain all letters of the alphabet and it should be written in of the original
 260 language. $\frac{\sqrt[n]{a}}{\sqrt[n]{b}} = \sqrt[n]{\frac{a}{b}}$. There is no need for special content, but the length of words should
 261 match the language. $a \sqrt[n]{b} = \sqrt[n]{a^n b}$.

262 Hello, here is some text without a meaning. This text should show what a printed text
 263 will look like at this place. $\sin^2(\alpha) + \cos^2(\beta) = 1$. If you read this text, you will get no
 264 information $E = mc^2$. Really? Is there no information? Is there a difference between this text
 265 and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives
 266 you information about the selected font, how the letters are written and an impression of
 267 the look. $\sqrt[n]{a} \cdot \sqrt[n]{b} = \sqrt[n]{ab}$. This text should contain all letters of the alphabet and it should
 268 be written in of the original language. $\frac{\sqrt[n]{a}}{\sqrt[n]{b}} = \sqrt[n]{\frac{a}{b}}$. There is no need for special content, but
 269 the length of words should match the language. $a \sqrt[n]{b} = \sqrt[n]{a^n b}$.

499 all! A blind text like this gives you information about the selected font, how the letters are
500 written and an impression of the look. $\sqrt[n]{a} \cdot \sqrt[n]{b} = \sqrt[n]{ab}$. This text should contain all letters
501 of the alphabet and it should be written in of the original language. $\frac{\sqrt[n]{a}}{\sqrt[n]{b}} = \sqrt[n]{\frac{a}{b}}$. There is no
502 need for special content, but the length of words should match the language. $a \sqrt[n]{b} = \sqrt[n]{a^n b}$.

Part III

503

APPENDIX

504

505

APPENDIX

A.1 SECTION A

And after the second paragraph follows the third paragraph. Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. $\sin^2(\alpha) + \cos^2(\beta) = 1$. If you read this text, you will get no information $E = mc^2$. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. $\sqrt[n]{a} \cdot \sqrt[n]{b} = \sqrt[n]{ab}$. This text should contain all letters of the alphabet and it should be written in of the original language. $\frac{\sqrt[n]{a}}{\sqrt[n]{b}} = \sqrt[n]{\frac{a}{b}}$. There is no need for special content, but the length of words should match the language. $a \sqrt[n]{b} = \sqrt[n]{a^n b}$.

After this fourth paragraph, we start a new paragraph sequence. Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. $\sin^2(\alpha) + \cos^2(\beta) = 1$. If you read this text, you will get no information $E = mc^2$. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. $\sqrt[n]{a} \cdot \sqrt[n]{b} = \sqrt[n]{ab}$. This text should contain all letters of the alphabet and it should be written in of the original language. $\frac{\sqrt[n]{a}}{\sqrt[n]{b}} = \sqrt[n]{\frac{a}{b}}$. There is no need for special content, but the length of words should match the language. $a \sqrt[n]{b} = \sqrt[n]{a^n b}$.

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. $\sin^2(\alpha) + \cos^2(\beta) = 1$. If you read this text, you will get no information $E = mc^2$. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of

532 the look. $\sqrt[n]{a} \cdot \sqrt[n]{b} = \sqrt[n]{ab}$. This text should contain all letters of the alphabet and it should
 533 be written in of the original language. $\frac{\sqrt[n]{a}}{\sqrt[n]{b}} = \sqrt[n]{\frac{a}{b}}$. There is no need for special content, but
 534 the length of words should match the language. $a \sqrt[n]{b} = \sqrt[n]{a^n b}$.

535 This is the second paragraph. Hello, here is some text without a meaning. This text should
 536 show what a printed text will look like at this place. $\sin^2(\alpha) + \cos^2(\beta) = 1$. If you read
 537 this text, you will get no information $E = mc^2$. Really? Is there no information? Is there
 538 a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at
 539 all! A blind text like this gives you information about the selected font, how the letters are
 540 written and an impression of the look. $\sqrt[n]{a} \cdot \sqrt[n]{b} = \sqrt[n]{ab}$. This text should contain all letters
 541 of the alphabet and it should be written in of the original language. $\frac{\sqrt[n]{a}}{\sqrt[n]{b}} = \sqrt[n]{\frac{a}{b}}$. There is no
 542 need for special content, but the length of words should match the language. $a \sqrt[n]{b} = \sqrt[n]{a^n b}$.

543 And after the second paragraph follows the third paragraph. Hello, here is some text
 544 without a meaning. This text should show what a printed text will look like at this place.
 545 $\sin^2(\alpha) + \cos^2(\beta) = 1$. If you read this text, you will get no information $E = mc^2$. Really?
 546 Is there no information? Is there a difference between this text and some nonsense like
 547 “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the
 548 selected font, how the letters are written and an impression of the look. $\sqrt[n]{a} \cdot \sqrt[n]{b} = \sqrt[n]{ab}$.
 549 This text should contain all letters of the alphabet and it should be written in of the original
 550 language. $\frac{\sqrt[n]{a}}{\sqrt[n]{b}} = \sqrt[n]{\frac{a}{b}}$. There is no need for special content, but the length of words should
 551 match the language. $a \sqrt[n]{b} = \sqrt[n]{a^n b}$.

COLOPHON

567

This document is typeset using the *UCD Thesis* style developed by Aonghus Lawlor¹.

568

This is in turn based on the `classicthesis` style developed by André Miede and Ivo Pletikosić. The style was inspired by Robert Bringhurst's seminal book on typography *The Elements of Typographic Style*.
